COVID-19 and Surfaces

For surfaces or packaging to be a problem, there has to be a unique set of events to occur. First, a large amount of the virus would have to be present. Then, it would need to survive long enough to result in spread. Finally, without washing your hands, you would have to touch your face.

The few studies done on this issue involved the use of high amounts of the virus, much more than what happens in a real world situation. And, while it proved the virus can stay alive on surfaces, it did not prove transmission.

Excess or incorrect usage of disinfectants can cause skin irritation and respiratory health issues, especially for those with asthma.

Bottom line, wear your mask, keep your distance, and wash your hands. Do your part!

2020 Urban Food Systems Symposium

The 2020 Urban Food System Symposium will be held virtually each Wednesday in October 2020.

The goal is to share knowledge on urban agricultural production, local food systems distribution, urban farmer education, urban ag policy, planning and development, food access and justice, and food sovereignty. Topics include nutrition and food security, climate change, food production, and more.

Registration is now open! Learn more about this event at www.urbanfoodsyste
mposium.org/.

Preserving Unripe Tomatoes

As fall approaches, those end of season unripe tomatoes are still usable. Be sure to pick them before a frost or freeze if canning them.

Unripe, or green, tomatoes can be preserved just like ripe tomatoes. So when canning them they still require acidification. Here are some ideas to can green tomatoes.

- Pickled Green Tomato Relish
- Pickled Sweet Green Tomatoes
- Piccalilli
- Fall Garden Relish
- Rummage Relish
- Oscar Relish
- Green Tomato Pie Filling
- Tomatillo Green Salsa—may use green tomatoes instead of tomatillos
- Spiced Green Tomatoes

Don’t want to can them, or it is after a frost or freeze? Then freeze them for later use.

Another Reason to Get Up and Move!

Being sedentary has been associated with several negative healthy outcomes. Now there is a potential link to cancer mortality.

In a study of 8,002 adults, studied over five years, found 268 participants were independent-ly associated with cancer mortality. Participants wore a hip-mounted accelerometer to measure activity for seven days. Replacing 30 minutes of sitting with 30-minutes of light activity resulted in 8% lower risk of cancer mortality. A 30-minute moderate amount of activity resulted in 31% lower risk of cancer mortality.

The message continues, get up and move for better health!

Hand Sanitizers are not Drinks!

Some hand sanitizers are being packaged in containers that look like food and drinks for adults and kids.

Some examples included packaging in beer cans, children’s food pouches, water bottles, juice bottles and vodka bottles. Some are also flavored such as chocolate or raspberry. This can disguise the sanitizer even more to smell like food.

Drinking or eating even a small amount of hand sanitizer can lead to cardiac effects, central nervous system problems, hospitalizations and even death. Seek medical help immediately.

Halloween and COVID-19

Do you get lots of trick-or-treaters for Halloween? This year might be a little different. Is it safe for kids to take candy from strangers during a pandemic?

First and foremost, follow your community guidelines. Know the keys to keep healthy, avoid crowds, wash your hands, wear a face covering. The look of face coverings may be quite creative this Halloween! Even if you are outside, you may still be around a lot of other goblins, so wear those masks. Small groups are better than large groups.

Designate one person to hand out treats that are individually wrapped. Don’t let the goblins dig into the bowl. Have hand sanitizer available for anyone to use.

Host a trunk-or-treat event and put extra space between cars to thin out the crowd. A Halloween drive-by parade in the neighborhood could be a spooky treat!

There is no need to wipe down the treat packaging. After trick-or-treating, wash your hands before snacking on those treats.

Above all, have fun and be safe!

CFSEC 2021 Call for Abstracts

The Consumer Food Safety Education Conference (CFSEC) will be virtual March 9-12, 2021. Plan now to submit an abstract for a poster or session. The theme is Now you Have my Attention: Hand Hygiene and Food Safety Education for Everyone.

Share your food safety education success in the following categories:

- Safe Food Handling in Today’s Food Landscape
- Food Safety Education Program Successes—posters only
- Cutting Through Clutter: What’s Working to Engage Consumers?

Abstracts will be accepted by October 14, 2020.

Willie and the Salad Bonanza

K-State Olathe is hosting a Salad Bonanza! This event is open to schools, 4-H, scouts, FFA and other youth groups. The goal is to reach youth interested in the scientific principles of plant growth.

Teams of four youth will grow Dwarf Blue Curled Vates kale, Hybrid Space Spinach and Looseleaf lettuce in the same container in a 43-day time span. The challenge is to see who can grow the most produce! Teams will also fill out documentation to track the progress.

This containers will be judged at K-State Olathe. Learn more about this miniature farm-to-fork event. Registration is due September 30.
According to the Centers for Disease Control and Prevention, it is estimated the 41% of adults are delaying or avoiding medical care because of COVID-19 concerns. This is alarming because this can lead to greater medical issues in the future and higher medical costs.

Fall Canning Tips

Done canning? Store your equipment with care for next season.

At this writing, the calendar still says summer, but there is a fall feel. Gardens may still be producing, so here are some end-of-season tips for food preservation.

- Do not can tomatoes from frost-killed or dead vines. Their pH may be higher than 4.6. Eat or freeze them for later use.
- Can pumpkin or other winter squash varieties safely in cubes. Do not mash or puree any winter squash for canning. Freeze mashed winter squash for later use.
- Apples are here! Preserve them by canning, drying or freezing.
- Preserve soup for easy meals. Combine meat and vegetables. Add noodles, pasta or thickeners when ready to serve.
- After the hunt, preserve your bounty with these tips for canning, freezing and drying venison.
- Jerky can be loaded with flavor! Dry it safely for a tasty treat.

Don’t Avoid Medical Care During COVID-19

According to the Centers for Disease Control and Prevention, it is estimated the 41% of adults are delaying or avoiding medical care because of COVID-19 concerns.

This is alarming because this can lead to greater medical issues in the future and higher medical costs.
